ANTI-SKID TAPE

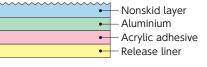

ANTI-SKID TAPE [AS-117, AS-127]

Anti-skid tapes are designed for the purpose of slip prevention in areas with slippery steps or slopes, as well as high risk workplaces. There are two options: AS-117 for flat surfaces and AS-127 for uneven surfaces.

– Release liner

Specifications

AS-117

Thickness(mm)	Width(mm)× Length(m)	Qty/Cs(rls)	Colors	
1.0	50 × 5	12	Black	
	100 × 5	6		
	400 × 5	2		

AS-127

T

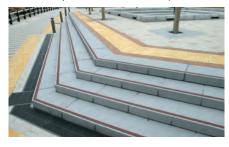

13-1Z/				
hickness(mm)	Width(mm)× Length(m)	Qty/Cs(rls)	Colors	
1.0	50 × 5	12	Green,Black, Yellow,White	
	100 × 5	6		
	150 × 5	6		
	400 × 5	2		

General characteristics

Product No.		AS-117	AS-127
Item	Unit	A3-117	A3-127
180° peeling force (For stainless plate)	N⁄20mm	18.00	18.00
Tensile strength	N⁄20mm	150	150

Application example

For skid prevention on steps and ramps in factories, stations, and various facilities

Construction method

Make the target surface flat and thoroughly remove moisture, oil and dust. Additionally, use a commercially available primer when the tape is applied to targets with many uneven surfaces or those located in crowded places.

When a target floor has a wide area, mark required positions with chalk first and then cut the tape to prepare the necessary amount.

Do not use scissors to cut the tape since the blade may chip off. Instead, use a cutting knife to cut the film (AS-117) or the aluminum layer (AS-127) on the reverse side and break the tape off.

For more effective use

• When the tape is applied to concrete surfaces, use a commercially available chloroprene rubber primer. • To ensure stable adhesion, cut the four corners of the tape so that they are round.

Handling and storage precautions

- Before using the product, thoroughly wipe off dust, oil and moisture from the surface where the tape is to be applied.
- Avoid using the tape at low temperature since high adhesion is not exhibited at low temperature.
- To ensure stable adhesion, apply appropriate pressure to the tape to make it adhere to the adherend securely.
- Some adhesive may remain on the adherend, or tape-pasted surfaces on an adherend may become discolored or damaged. Thus, check for the presence of these problems before use.
- Store the product in a cool location out of direct sunlight.
- Take care when lubricant substances are stuck to product surfaces, such as soap or oil, as they are very slippery.

Place a piece of tape on the surface of the target area, making sure that the surface is not warped. Peel the release liner from one end, apply the tape, and strongly press the tape with a roller or a rubber hammer.
